

PerfectPleat® PerfectPleat® HC

Extended Surface, Pleated Filter with Process-Controlled Quality

- Patented media, filter design, and manufacturing process. Patents covered under one or more of the following US 6398839 B2; US 6254653 B1; US 6159318; US 6165242; US 6387140 B1 (1" model only)
- Form and fit unlike any other pleat available today
- Self-supporting DuraFlex[®] media made from virgin fiber; no wire support needed
- Consistent media with controlled fiber size and blend
- HC (High Capacity) model available for applications where airflow and longer life are issues
- Available in 1" and 2" models

The Air Filtration Leader

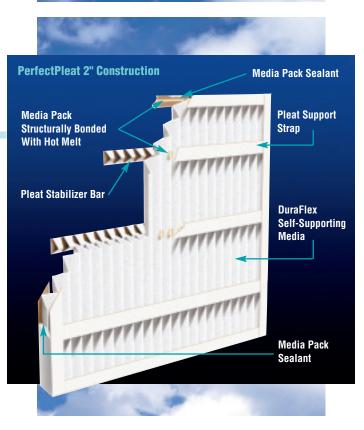

AAF International, one of the world's largest manufacturers of air filtration products, is extremely proud to announce a true innovation in the extended surface, pleated panel filter – the PerfectPleat. It is a filter with form and fit unlike any pleated filter in the marketplace today – and with the filtering efficiency you need and expect.

Superior Design and Construction

Drawing on its years of experience in manufacturing quality air filters, AAF has created a state-of-the-art process for producing pleated filters. The extremely high quality of these filters is a result of three unique innovations: a new automated manufacturing process; a unique, self-supporting media; and a filter construction that provides incredible strength without wire support.

Since their introduction, pleated filters have become a larger and more important segment of the filtration marketplace. However, current design and process are not conducive to the manufacture of consistently pleated media packs or finished filters. Inconsistency in pleat arrangement, variations in media, improper bonding of media to frame, along with antiquated manufacturing techniques, have a negative impact on efficiency, resistance, durability, and strength.

The new automated and controlled process AAF has developed for the PerfectPleat eliminates these inconsistencies and irregularities. Our new automated manufacturing process offers consistency our competitors cannot match in the everyday manufacture of pleated filters.

Pleat Stabilizer Adhesive Detail

DuraFlex®Media - Patented Media Design

Uniform size virgin fibers are assembled in closely controlled blends to create a media that is both self-supporting and remarkably consistent in performance. The self-supporting characteristics allow a pleating pattern that promotes excellent dust holding and resistance characteristics. The PerfectPleat meets or exceeds all current expectations for service life and required airflow. PerfectPleat HC and PerfectPleat 1" and 2" are classified MERV 7.

DuraFlex® Media is Self-Supporting

DuraFlex media's unique construction makes it self-supporting. When pleated, DuraFlex will hold its shape without the wire support characteristic of conventional pleated filters. That means no potential for the formation of rust and safer handling - no nicks or cuts for the installer. With the superior resiliency of DuraFlex media and no need for wire support, the PerfectPleat can sustain significant abuse and maintain its shape and pleat spacing. The absence of the wire also makes the filter totally incinerable, which simplifies disposal.

DuraFlex® – Media With A Memory

PerfectPleat with DuraFlex media produces a filter with excellent form and fit.

As a result of its unique design, PerfectPleat can withstand significant damage.

DuraFlex media has "memory" which allows PerfectPleat to remain functional, even when the frame has been compromised.

2" PerfectPleat - Heavy Duty Frame

The perimeter frame of the PerfectPleat HC and PerfectPleat is constructed from the highest wet-strength 28 pt. beverage carrier board available, securely bonded to the media pack. The 28 pt. thickness improves filter strength and helps resist damage.

Newly designed pleat stabilizers, bonded to the media to ensure uniform pleat spacing, provide additional strength. Three sets of pleat stabilizers are positioned on the air-leaving side of the filter. On the air-entering side, three support straps add to the PerfectPleat's strength. The support straps and pleat stabilizers ensure integrity against turbulent airflow and provide excellent lateral stability for installation in side-access systems.

Applications

The PerfectPleat HC is ideal for applications where pleated filters are currently in use and higher efficiencies are required or desired.

The PerfectPleat is identical to the PerfectPleat HC but with approximately 25% less media. It is best suited for standard capacity pleated filter applications.

Every PerfectPleat offers superior durability and performance when properly installed and maintained.

1" PerfectPleat - Strength and Durability

The 1" PerfectPleat HC and PerfectPleat are the same durability and performance as the 2" models. Both made using DuraFlex media encased in a unique beverage carrier board. PerfectPleat HC 1" features 3 support straps on the air entering side and a patented die cut pattern (patent no. US 6387140 B1) on the air leaving side. PerfectPleat 1" has two support straps on the air entering side and the same die cut on the air leaving side. Both models resist crushing and abuse and can be used in any application where 1" filters are currently in place. PerfectPleat HC and PerfectPleat are classified MERV 7.

PerfectPleat HC 1" air entering side.

PerfectPleat HC 1" air leaving side.
